

Calling ALL Summer Institute alumni, facilitators, leaders and friends!

You are cordially invited to the

Scientific Teaching in Practice Webinar Series

The Scientific Teaching in Practice Webinar Series will extend the learning and dialogue that occurs at the Summer Institutes (SI) on Scientific Teaching into a year-round community that supports and inspires evidence-based teaching. Each month, the SI community will be invited to attend an interactive webinar related to the practice and/or dissemination of scientific teaching. The webinar will be facilitated by someone experienced in that area, integrating significant time for questions and open discussion.

Join Us for Our Inaugural Webinar!

First Steps in Implementing Scientific Teaching

Friday, January 27, 3 – 4 PM (Eastern Time)

Zoom Link: <https://zoom.us/j/457106650>

Facilitators: Beth Luoma, PhD & Tracie Addy, PhD, MPhil
Summer Institutes on Scientific Teaching Program
Directors, Yale University

What does it look like to implement scientific teaching in your classroom? How does one launch the first “experiment” by trying out an active learning activity, a new inclusive strategy or a new form of assessment in his/her class? In what ways have you already achieved success? What barriers have you encountered? In this inaugural webinar of the Scientific Teaching in Practice Series, the Summer Institutes on Scientific Teaching Program Directors will lead participants through community sharing of that first scientific teaching “experiment” and how the first steps in implementing scientific teaching can lead to incremental and impactful change in undergraduate STEM education.
